

DM660 ZPK DEBURRING MACHINE

GENERAL DESCRIPTION:

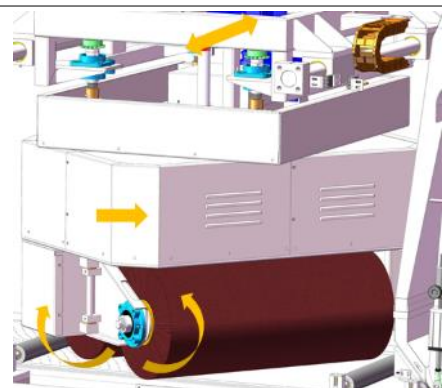

DM660 ZPK and DM660 PK are deburring and edge rounding machines for sheet metal and parts cut by punching, shearing, laser or plasma.

Removing burrs and creating round edges using planetary brushes technology is possible on parts up to 660mm width and on some as small as 50x50mm.

Inside and outside contours of stainless steel, steel and aluminium parts cut by laser or other thermal processes are burrs cleaned from the total surface.

TECHNICAL DATA:

Working capacity (mm)	660x120 (max. width x thickness)
Feeding speed (m/min.)	0.9 – 13
Planetary brushes (mm)	2x Ø350x800
Abrasive belt (mm)	660x2200
Abrasive belt + Brushes motor (kW)	11 + 2x 2.2
Consumption (A)	56
Dimensions approx. (mm)	3000x1200x2300
Weight approx. (kg)	3200

Double brush planetary head station with oscillation

Deburring contact roller head before edge rounding

Conveyor belt with vacuum system
